ORS Genoscope.			BP 191 91006 EVRY cedex - FRANCE (E-mail : segref@genoscope.cns.fr	- Web : www.genoscope.cns.fr)		collaboration with the Berkeley Drosophila Genome Project (BDGP).	The BDGP is constructing a physical map of the Drosophila	melanogaster genome using these BACs. For further information	please see http://www.fruitfly.org The BDGP Drosophila	melanogaster BAC library was prepared by Kazutoyo Osoegawa and	Aaron Mammoser in Pieter de Jong's laboratory in the Department of	Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,	NY. The library is named RPCI-98 and was constructed by partial	ECORI digestion of Drosophila DNA provided by the BDGP from the	isogenic strain y2; on bw sp, the same strain used for the BDGP's	Pl and EST libraries. A more detailed description of the library	and how to order individual BAC clones, the entire library, or	filters for hybridization from the BACPAC Resource Center can be	RES Location/Qualifiers	10111	/organism="Drosophila melanogaster" /db xref="taxon:7227"	100 T T T T T T T T T T T T T T T T T T

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster abC library was prepared by Kazucyo Sosegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2; on by, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the 1sogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://Dacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Buropean Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

collaboration with the Berkeley Diosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BAGs. For further information please see http://www.fruitily.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pater de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be Location/Qualifiers

Determination of this BAC-ond sequence was carried out as part of a collaboration with the Buropean Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cttgcttaatgaagaaaatattggtttagcatcaagtttgaacaaagcggtgaaaatttc 245

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC ilbrary was prepared by Kazutoyo Oscogawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Drosophila melanogaster genome survey sequence T7 end of BAC BACN37F11 of DrosBAC library from Drosophila melanogaster (fruit AL108152
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Web: www.genoscope.cns.fr)
Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Direct Submission

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billand at CEPH (Centre project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                         Drosophila melanogaster genome survey sequence T7 end of BAC BAC BACILILI of DrosBAC library from Drosophila melanogaster (fruit fly), genomic survey sequence.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp, the same strain used for the BDGP's PI and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be filters for hybridization from the BACPAC Resource Center can be

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ϊ;
                                                                                                                                                                                                                                           The present invention provides a number of human immune system associated dense which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, Alzheimer's disease, Alzheimer's disease, and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       11480 ATATATTCCATTACATTATTCTTTACAAACATTCATTTAATTATATAATTACTAATTAAT 11421

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1744 TAAATCAATTATCTTTTTTTAAAAAATTTCAAAATATAAAATTAAAATTAACACTAATTAT 1685

A CONTRACTOR OF THE SET OF SET

This is the nucleotide sequence of a gene cluster involved in the biosynthesis of the Escherichia coli 0157 O antigen. The gene cluster was obtained by PCR amplification of E. coli 0157.87 strain (C664-1992) MAN using primers (see AAX06752-63) based on 0 antigen gene sequences. 12 Open reading frames within the gene cluster were identified on the basis of homology to known sequences. The genes encode proteins (see AAW88312-33) involved the synthesis of sugars present in the polysaccharide antigen, and in the transport or processing of polysaccharide or oligosaccharide units. The use of nucleic acid molecules derived from particular P-PSDB; AAW88312, AAW88313, AAW88314, AAW88315, AAW88316, AAW88317, AAW88318, AAW88319, AAW88320, AAW88321, AAW88322, AAW88323. assembly and transport genes, particularly wbd (transferase), wax (flippase) and wzy (polymerase) genes, within O antigen gene clusters improves the specificity of methods for the detection and identification of O antigens, e.g. in tests of food or faecalderived samples, or samples from patients. The O antigen is a major virulence factor of enteropathogenic E. coli strains that may play a role in gene cluster /note= "wbdR gene (ORF12), this region is specifically claimed in Claim 6; encodes AAW88323" Length 14024; Nucleic acid molecules specific for bacterial polysaccharide antigens - useful for detecting specific strains in, e.g. food, faeces or patient samples noite "manc gene (ORF10); encodes AAWBB321" [0523.,11893 /note= "manD gene (ORF11); encodes AAW88322" 12007..13123 Seguence 14024 BP; 4546 A; 2263 C; 2832 G; 4383 T; 0 other; specifically claimed in Claim 6491..7609 Score 68.2; DB 20; Pred. No. 0.00084; g "ORF7; encodes AAW88318" /note= "ORF9; encodes AAW88320" 9071..10519 encodes AAW88319" /product- N-acetyl_transferase cause diarrhoea and haemorrhagic colitis.

The present invention also describes a method of detecting the presence of E. coli of a particular H serotype in a sample, comprising specifically hybridising a nucleic acid, preferably at least a pair, derived from a flagellating gene, specific for a particular flagellaring gene associated with the H serotype, to any E.coli in the sample which contain the gene, and detecting any hybridised molecules, identifying the presence of that

serotype in the sample. (I) are useful for: (1) detecting the presence of E. coli of H serotype in a sample by hybridising at least one or a pair of (I) to any E. coli in the sample and detecting the hybridised nucleic acid molecules; and (2) for detecting the presence of both o and H serotypes of E. coli by hybridising at least one or a pair of (I) to any E. coli present in the sample and detecting the hybridised nucleic acid molecules. (I) is particularly useful for detecting the combination of O and H antigen. Hybridised (I) when using at least one (I) is detected by southern blot analysis and, when using a pair of (I), is detected by polymerase chain reaction (PCR). AAZ56399 to AAZ56420 represent primers used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             273

                                                                                                                                                                                                                                                              982 nucleotide sequences isolated from the Enterococcus faccalis genome.

AAX12038 to AAX13919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer-based system can identify fragments of the Enterococcus faccalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faccalis in samples. They can also be used for progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faccalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faccalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              computer readable medium has been developed which has recorded on it

A reaction mixture for the synthesis of a sialylated oligosaccharide is useful for synthesising sialylated oligosaccharide such as ganglioside. I yegoanglioside or their mindrs. Glycosyltransferases are useful for chemo-enzymatic synthesis of oligosaccharides, including gangliosides and other oligosaccharides that have biological activity. The enzymes and nucleic acids that encode them are useful for studies of the pathogenesis mechanisms of organisms that synthesize ganglioside minates, such as C. jejuni and the nucleic acids are used as probes to study expression of genes involved in ganglioside minatic synthesis. Antibodies raised against the glycosyltransferases are also useful for analyzing the expression patterns of these genes involved in pathogenesis. The oligonucleotides for inhibiting expression of the Campylobacter oligonucleotides for inhibiting expression of the Campylobacter can mask the pathogens from the host's immune system. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel glycosyltransferase polypeptides and polynucleotides useful for blosynthesis of ganglioside and ganglioside mimics, as diagnostic reagents and as immunogen for producing antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           oligosaccharides are useful as diagnosing reagents or as therapeutics and as immunogens for producing antibodies. Bacterial glycosyltransferase can be used to catalyse the formation of oligosaccharides that are identical to the corresponding mammalian structures and are easier and less expensive to produce in large quantity, compared to the mammalian glycosyltransferase. The bacterial origin of the enzymes facilitates expression of large
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 gtagaatctatatataaatcaaacgcttactgattttgagttcataattgtcattgataat 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 atagaaaagctgtatcaatcagacttttaaagatataga---aataattgtagttgatgat 117

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        5899 ATAGAAAGCTGTATCAATCAGACTTTTAAAGATATAGA---AATAATTGTAGTTGATGAT 5843
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  oligonucleotides for inhibiting expression of the Campylobacter enzymes that are involved in the biosynthesis of ganglioside mimics that are involved in the biosynthesis of ganglioside mimics that are mask the pathogens from the host's immune system. The oligosaccharides are useful as diagnosing reagents or as therapeutics and as immunogens for producing antibodies. Bacterial glycosyltransferase can be used to catalyse the formation of oligosaccharides that are identical to the corresponding mammalian structures and are easier and less expensive to produce in large quantity, compared to the mammalian glycosyltransferase. The bacterial origin of the enzymes facilitates expression of large quantities of the enzymes using relatively inexpensive prokaryotic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 gtagaatctatattaaatcaaacgcttactgattttgagttcataattgtcattgataat 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A reaction mixture for the synthesis of a sialylated oligosaccharide is useful for synthesising sialylated oligosaccharide such as ganglioside, lysoganglioside or their mimics. Glycosyltransferases are useful for chemo-enzymatic synthesis of oligosaccharides, including gangliosides and other oligosaccharides that have biological activity. The enzymes and nucleic acids that encode them are useful for studies of the pathogenesis mechanisms of organisms that synthesize ganglioside mimics, such as C. jejuni and the nucleic acids are used as probes to study expression of genes involved in ganglioside mimetic synthesis. Antibodies raised against the glycosyltransferases are also useful for analyzing the expression patterns of these genes involved in pathogenesis. The nucleic acids are also useful for designing antisense.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 atgaattatagtatcattatgtcggtatataaatgagcctttaaattatgtgagagattca 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system discorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid treukaemia, Alzheimer's disease, AlDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.

                                                                                                                                                                                                          Statistical for synthesising simplifies of oligosaccharides such as ganglioside, lysoganglioside or their mimics. Glycosyltransferases are useful for chamo-enzymatic synthesis of oligosaccharides, concluding gangliosides and other oligosaccharides that have biological activity. The enzymes and nucleic acids that encode them are useful for studies of the pathogenesis mechanisms of organisms chart synthesize ganglioside mimics, such as C. jejuni and the nucleic acids are used as probes to study expression of genes involved in ganglioside mimics, such as C. jejuni and the cupyled in ganglioside mimics, such as C. jejuni and the nucleic acids are used as probes to study expression of genes involved in ganglioside mimics. Antibodies raised against the glycosyltransferases are also useful for analyzing the expression patterns of these genes involved in pathogenesis. The nucleic acids are also useful for designing antisense oligonucleotides for inhibiting expression of the Campylobacter coligonucleotides for inhibiting expression of the Campylobacter coligonaccharides are useful as diagnosing reagents or as therapeutics that can mask the pathogens from the host's immune system. The oligosaccharides are useful as diagnosing reagents or as therapeutics and as immunogens for producing antibodies. Bacterial glycosyltransferase can be used to catalyse the formation of cligosaccharides that are identical to the corresponding mammalian glycosyltransferase. The mammalian glycosyltransferase. The mammalian plycosyltransferase.                                                                                                                for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     102 cataattgtcattgataatccaagtagaggtgatttaaagcaattcttaacagaatattc 161

                                                                                                A reaction mixture for the synthesis of a sialylated oligosaccharide
is useful for synthesising sialylated oligosaccharide such as
ganglioside, lysoganglioside or their mimics. Glycosyltransferases
are useful for chemo-enzymatic synthesis of oligosaccharides,
including gangliosides and other oligosaccharides that have
biological activity. The enzymes and nucleic acids that encode them
biological activity. The enzymes and nucleic acids that encode them
care useful for studies of the pathogenesis mechanisms of organisms
that synthesize ganglioside mimics, such as C. jejuni and the
nucleic acids are used as probes to study expression of genes
involved in ganglioside mimetic synthesis. Antibodies raised against
the glycosyltransferases are also useful for analyzing the
expression patterns of these genes involved in pathogenesis. The
nucleic acids are also useful for designing antisense
oligonucleotides for inhibiting expression of the Campylobacter
enzymes that are involved in the biosynthesis of ganglioside mimics
that can mask the pathogens from the host's immune system. The
oligosaccharides are useful as diagnosling reagents or as therapeutics
and as immunogens for producing antibodies. Bacterial
and as immunogens for producing antibodies. Bacterial
structures and are easier and less expensive to produce in large
curretters and are easier and less expensive to produce in large
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cataattgtcattgataatccaagtagaggtgatttaaagcaattcttaacagaatattc 161

Enterococcus faecalis

```
982 nucleotide sequences isolated from the Enterococcus faecalis genome. AAX12938 to AAX13919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer-based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1397 TCGCGAAGAAAACGGACATATTTCAGAAGCAACTAACTCAGCTTTGTCGATTGCTACTGG 1338

Sequences AAS45296-AAS45520 represent chemically pretreated genomic DNA molecules associated with the cell cycle and specific PCR primers of the invention. The sequences are useful for detecting the methylation state of all CPG dimucleotides in a sequence and therefore for analysing associated diseases. By analysing cytosine methylations in the pretreated DNA, genetic and/or epigenetic parameters for the diagnosis and therapy of existing diseases or the predisposition to specific diseases can be ascertained. The parameters may be compared to another set of genetic and/or epigenetic parameters, the differences serving as basis for diagnosis and/or prognosis events which are disadvantageous to patients. The sequences of the invention are useful for the diagnosis and therapy of HIV infection, neurodegenerative disorders, graft-versus-host disease, aging, glomerular disease, Lewy body disease, arthritis,

                                                                                                                                                                                                                                                                                                   δy
                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                The invention relates to a nucleic acid comprising a sequence of 18 bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with bisulphite, of genea associated with tumour suppression and concogenes having a sequence taken from 536 (actually 533 since numbers 408, 458 and 500 are missing from the sequence listing) sequences (Ss) and sequences complementary to (Ss). The nucleic acid may be a peptide nucleic acid-oligomer (PNA) of at least 9 nucleic acid may be a peptide nucleic acid-oligomer (PNA) of at least 9 nucleotides and may for analysing diseases associated with Cpc dinucleotides e.g. cancers and tumours. The probes can also be used in a method for ascertaining genetic and/or epigenetic parameters for the diagnosis and/or thrapy of existing diseases or the predisposition to specific diseases, by analysing cytosine methylations. The parameters may be compared to another set of genetic and/or epigenetic parameters. The parameters of the compared to another set of genetic and/or epigenetic parameters. The parameters of the compared to another set of genetic and/or prognosis events which are disadvantageous to patients. The present sequence is one of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       3,
                                                                                                                                                                                                                                                                                                                                                                                                                               oncogenes. Sequences with even numbered Seq ID numbers are the complementary sequence of the corresponding odd numbered sequence (e.g. ID 2 and ID1, ID 536 and ID 535, except for those whose partner sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1;
                                                          is useful for synthesising slatylated oligosaccharides such as are useful for chemo-enzymatic synthesis of oligosaccharides.

C ganglioside, lysoganglioside or their mimics. Glycosyltransferases are useful for chemo-enzymatic synthesis of oligosaccharides, including gangliosides and other oligosaccharides that have biological activity. The enzymes and nucleic acids that encode them are useful for studies of the pathogenesis mechanisms of organisms that synthesize ganglioside mimics, such as C. jejuni and the nucleic acids are used as probes to study expression of genes involved in ganglioside mimetic synthesis. Antibodies raised against the glycosyltransferases are also useful for analyzing the expression patterns of these genes involved in pathogenesis. The oligonucleotides for inhibiting expression of the campylobacter oligonucleotides for inhibiting expression of the campylobacter canzymes that are involved in the biosynthesis of ganglioside mimics that can mask the pathogens from the host's immune system. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 atgaattatagtatcattatgtcggtatataatgagcctttaaattatgtgagagattca 60
                                               A reaction mixture for the synthesis of a sialylated oligosaccharide
                                                                                                                                                                                                                                                                                                                                                 oligosaccharides that are identical to the corresponding mammalian structures and are easier and less expensive to produce in large quantity, compared to the mammalian glycosyltransferase. The bacterial origin of the enzymes facilitates expression of large quantities of the enzymes using relatively inexpensive prokaryotic expression systems.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           121 ccaagtagaggtgatttaaagcaattcttaacagaatattcagttgtagataatagaata

The invention relates to a nucleic acid comprising a sequence of 18 bases, of a segment of chemically pretracted DNA (CP DNA) e.g. with bisulphite, of genes associated with tumour suppression and concedence having a sequence taken if trom 536 (actually 533 since numbers 408, 458 and 500 are missing from the sequence listing) sequences complementary to (Ss). The nucleic acid may be a complementary to (Ss). The nucleic acid may be a complementary to (Ss). The nucleic acid may be compart of a set of probes for detecting the cytosine methylation state and/or single nucleotide polymorphisms and also to be used in an carray for analysing diseases associated with cpc dinucleotides e.g. cancers and tumours. The probes can also be used in a method for a scertaining genetic and/or epigenetic parameters for the diagnosis and/or therapy of existing diseases or the predisposition to specific diseases, by analysing cytosine methylations. The praemeters may be compared to another set of genetic and/or epigenetic parameters which as differences serving as basis for diagnosis and/or prognosis events which are disdivantageous to patients. The present sequence is one of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         oncogenes. Sequences with even numbered Seq ib numbers are the complementary sequence of the corresponding odd numbered sequence (e.g. ID 2 and ID1, ID 536 and ID 535, except for those whose partner sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Fragments of chemically modified genes associated with tumour suppressor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               351 aactctaatagaattgatagaccaaaaaggaaatttagtatataaaacaacgagaaagtaa 410
